

Multi-Channel Sales Sync

Reconcile Shopify, Amazon, Faire, PayPal and Klarna into one clean ledger. Built and shipped at agbagerard.com.

WHAT IT DOES

Ingests CSVs from Shopify, Amazon, Faire, Stripe, PayPal, Klarna and your bank. Matches transactions, surfaces anomalies (cross-period fees, multi-currency orders, chargebacks), and outputs 4 polished CSVs and a one-page summary.

REQUIREMENTS

- n8n v1.50+ (self-hosted or cloud)
- A folder mounted at `/files/data/` accessible to your n8n container
- Your channel CSVs named `sample_<channel>_<period>.csv` (rename or update the Read nodes)

QUICK START

1. Import the workflow

In n8n, click the menu > Import from File > select `multi-channel-sales-sync.json`. The workflow appears with all 40 nodes wired.

2. Drop your CSVs into `/files/data/`

If you self-host n8n with Docker, add a bind mount to docker-compose: - `./data:/files/data`. Then restart the container.

3. Point the Read nodes at your files

Open each Read CSV node and update the file path. Keep the same column names as the sample CSVs (or edit the downstream Code nodes to match yours).

4. Run it

Click Execute Workflow. The four output CSVs land in `/files/data/`: `journal_entries.csv`, `reconciliation_report.csv`, `discrepancies.csv`, `sku_margin_report.csv`. The `summary.md` is your monthly snapshot.

Stuck? Email hello@agbagerard.com

I read every reply. If you want this installed on your real data (Shopify Plus, Amazon FBA, Faire, etc.) in 2 weeks fixed-price, book a call at agbagerard.com/work-with-me.
